

Tages Eckhardt Systematic Short-Term UCITS Fund

(sub fund of Tages International Funds ICAV)

October 2021

INVESTCORP-TAGES

FIRM DESCRIPTION

Eckhardt Trading Company was founded in 1991 by William Eckhardt in Chicago. Eckhardt is a research driven investment manager with a systematic, technical and evolutionary approach to global markets. The manager employs a variety of short term and pattern recognition strategies with an average trade length of under 10 days. Since its founding, the firm has prioritised ongoing research and development, with a dedicated research team that has been working together for more than a decade. William Eckhardt has been a pioneer in the systematic space since the 1980's, culminating in a research partnership with the University of Chicago.

INVESTMENT OBJECTIVE & STRATEGY DESCRIPTION

The investment objective of the Fund is to achieve long-term capital growth. Please refer to the latest prospectus and the relevant key investor information document(s) of the Fund ("KIID") for more information. Documents can be found at www.investcorp-tages.com.

The strategy uses market volatility as a key metric to identify and capture alpha by trading several models across multiple time horizons and volatility regimes. Eckhardt's unique analysis and understanding of volatility characteristics employs strategies across three system groups: 1) Short-term volatility trend captures price changes across short-term time frames in periods of changing volatility; 2) Pattern recognition uses proprietary models to seek contrarian profit opportunities during periods of consolidating or reversing markets; and 3) Risk-off alpha systems aim to capture alpha in periods of higher volatility, particularly in equity markets. The program uses a different set of signals to trade a select subset of commodities which Eckhardt has identified as behaving differently to other key markets. The Eckhardt program is based on 40 years of pioneering research from Bill Eckhardt and his team, applying evolutionary computing and risk-based utility theory with in-depth volatility analysis. The current portfolio has an average holding period of less than 10 days.

PERFORMANCE SUMMARY

	MTD	YTD
Tages Eckhardt Systematic Short-Term UCITS Fund (GBP Founder) [TESSTGA ID Equity]	7.22%	2.21%
S&P 500 [SPXT]	7.01%	24.05%

COMMENTARY

All the system groups contributed positive returns in October with Evolution Strategies delivering net profits on the year. Profits came from all four asset classes.

There were long and short side gains in most US, European, and Pacific Rim fixed income products. Short-side trades on the shorter end of the yield curve were standout performers, as investors began to price in a tapering of central bank asset purchases and potential rate rises in 2022.

Trading in stock indices delivered gains on the long side, fuelled by third quarter earnings surpassing expectations and record inflows into passive index funds.

Consumers and Industry continued to be frustrated by shortages as supply chains struggled to regain their footing amid the mixture of re-openings and reimposed COVID lockdowns. Long positions in energies, industrial metals and grains made gains as buyers across the globe competed for limited and slow-moving supplies.

The new Sentiment Alpha systems contributed strongly for their first month of trading. Good profits were made in US fixed income, most notably in 2-Yr. notes, also in grains, currencies, metals and stock indices.

RISK GLOSSARY

Credit and Counterparty Risk: A counterparty may fail in paying the proceeds of sale for assets sold by the Sub-Fund or may fail in delivering securities purchased by the Sub-Fund. The Sub-Fund may also incur the risk that a counterparty may fail to settle a transaction in accordance with its terms and conditions because the contract is not legally enforceable or because it does not accurately reflect the intention of the parties or because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem, thus causing the Sub-Fund to suffer a loss.

Derivatives and Leverage Risk: The Sub-Fund may use derivatives as a means of gaining indirect exposure to a specific asset or as part of a strategy designed to reduce exposure to other risks, such as interest rate or currency risk. Whilst this is intended to help the Sub-Fund to manage risk or to take investment positions more efficiently or effectively than could be done otherwise, derivatives can involve the use of debt to finance the purchase of assets (leverage) and the risk of higher volatility, especially if some of the expected offsetting positions between long and short investments do not work as expected, and the Sub-Fund may be exposed to additional risks and costs as a result.

Short Selling Risk: The Sub-Fund may create synthetic short positions through the use of derivatives. Short positions behave differently to long positions; for example, the Sub-Fund can come under pressure to close out short positions at short notice and before an offsetting long position can mature. This can create unexpected losses from positions that might otherwise have been seen as low risk or well hedged.

For a more detailed explanation of risks, please refer to the "Special Considerations and Risk Factors" section of the prospectus.
